

2m:

1) Why BI is important:

→ Measurement: Creating KPI based on historic data

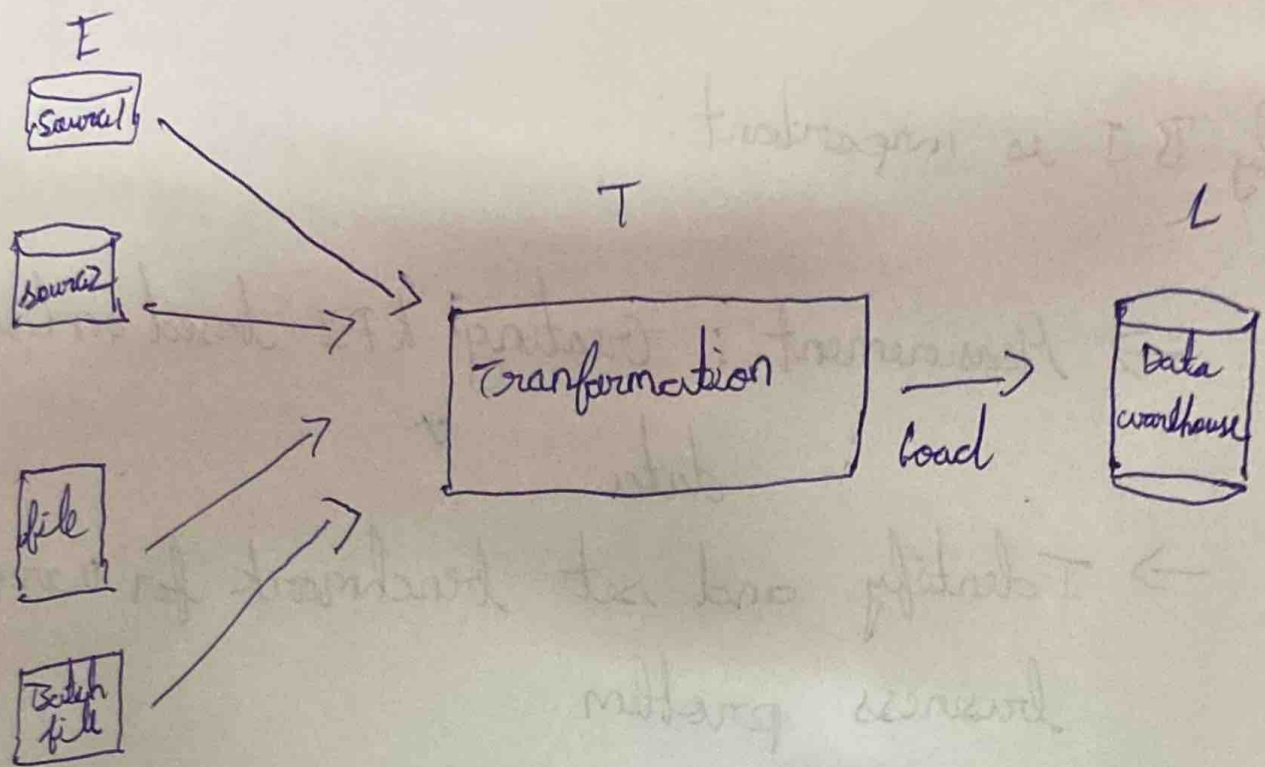

→ Identify and set benchmark for varied business problem

→ BI helps on data visualization that enhances the data quality and there by quality of decision making

→ BI systems can be used not just by enterprises but SME (Small and Medium Enterprises)

2) ETL:-

The mechanism of extracting information from source system and bringing it into the warehouse is commonly known as Extract, Transformation and Load

3) Dashboards :-

Business ~~and~~ Intelligence dashboards are information management and data visualization. Content creators can use interactive elements like filters and actions to combine charts, graphs and reports in a single screen for snapshot overview.

4) Main Aspects of BI strategy:-
