Q6. **Passage**  
The Unique Iron Age Experimental Centre at Lajire,about 40km west of Copenhagen serves as a museum, a classroom and a place to get away from it all.How did people live during thr Iron Age?How did they support themselves/What did they eat and how did they cultivate the land?These amd myriad of other question prodded the pioneers of the Lejre experiment Living in the open and working 10 hours a day,volunteers from all over Scandinavia led by 30 experts, built the first in the anticient encampment in a matter of months.The house walls were of clay,the roofs of hay -all based on original design.Then came the secound stage-getting back to the basics of living.Families were invited to stay in the 'prehistoric village' for a week or two at a tome and rough it Iron Age-style Initisally, this experiment proved none too easy for modern Danes accustomed to central heating,but it convinced the central that there was something to the Lejre project.Little by little,the modern iron Agers learnt that their huts were,after all,habitable.The problems were numeouus-smoke belching out from the rough-and-ready fireplaces into the rooms and so on.These problems,however,have led to some discoveries:domed smoke ovens made of clay,for examples give out more heat and consume less fuel than an open fire,and when correctly stoked,they are practically smokless By contacting other musuems, the Lejre team has been able to reconstruct ancient weaving looms and pottery kilns. Iron Age dyeing techniques,using local natural vegetatio,have also been revived,as have ancient banking and cookling methods.

Q22. Read the passage and answer the questions  
Environmental toxins which can affect children are frighteningly commonplace. Besides lead, there are other heavy metals such as mercury, which is found frequently in fish, that are spewed into the air from coal-fired power plants, says Maureen Swanson, MPA, director of the Healthy Children Project at the Learning Disabilities Association of America. Mercury exposure can impair children's memory, attention, and language abilities and interfere with fine motor and visual spatial skills. A recent study of school districts in Texas showed significantly higher levels of autism in areas with elevated levels of mercury in the environment. ?Researchers are finding harmful effects at lower and lower levels of exposure, says Swanson. They are now telling us that they don't know if there's a level of mercury that's safe.Unfortunately, some of these chemicals make good flame retardants and have been widely used in everything from upholstery to televisions to children's clothing. Studies have found them in high levels in household dust, as well as in breast milk. Two categories of these flame retardants have been banned in Europe and are starting to be banned by different states in the United States. The number of toxins in our environment that can affect children may seem overwhelming at times. On at least some fronts, however, there is progress in making the world a cleaner place for kids?and just possibly, reducing the number of learning disabilities and neurological problems. With a number of efforts to clean up the environment stalled at the federal level, many state governments are starting to lead the way. And rather than tackle one chemical at a time, at least eight states are considering plans for comprehensive chemical reform bills, which would take toxic chemicals off the market  
All these are harmful effect of mercury in the children EXCEPT

- Affect driving skill
- Causes attention deficits ordered
- lead to neurological problems
- Impacts ability to learn language

Reason: Sum to n no of terms in a geometric progression is  $S_n = a(1 - r^n)/(1-r)$  . Applyting a = 3, n = 5 and r = 3 we get  $S_5 = 3(1 - 3^5)/(1 - 3)$   
= 363. Hence the correct answer is 363.
